Cognitive theory suggests that once an individual has experienced the negative thinking associated with anxiety and depression, there is an increased risk that he or she will develop maladaptive cognitive schemas, which, with repetition, can become entrenched (Beck, 1995). For many clients, a small amount of nervousness or disappointed expectations can trigger a rush of negative cognitions (e.g., "Terrible things will happen," "I am a failure," "I feel overwhelmed," "I can't ...

Social cognitive theory was developed by Stanford psychologist Albert Bandura. The theory views people as active agents who both influence and are influenced by their environment. A major component of the theory is observational learning: the process of learning desirable and undesirable behaviors by observing others, then reproducing learned behaviors in order to maximize rewards.
