Communication Protocol Specification and Verification ...

Communication Protocol Specification and Verification is written to address the two issues discussed above: the needs to specify a protocol using an FDT and to verify its correctness in order to uncover specification errors in the early stage of a protocol development process. The readership primarily consists of advanced undergraduate students, postgraduate students, communication software developers, telecommunication engineers, EDP managers, researchers and software engineers.

model of protocols. Protocol specification requires a clear definition of both the services to be provided by a given protocol layer and the protocol entities within the layer that cooperate to provide the service. Verification, then, consists of two parts: (1) showing that the entities ~ollectively

Communication protocols are rules whereby meaningful communication can be exchanged between different communicating entities. In general, they are complex and difficult to design and implement. Specifications of communication protocols written in a natural language (e.g. English) can be unclear or ambiguous, and may be subject to different interpretations. As a result, independent ...

We develop service specifications of several representative protocols by using formal techniques from software engineering such as abstract machines and buffer histories. A survey of protocol verification methods and a bibliography indexed by key phrases are also provided.

Reusable protocol verification is exactly what it sounds like: the use of FPV properties that describe a particular communication protocol.

Protocol Verification - an overview | ScienceDirect Topics

Protocol Specification and Verification . In the 1980s, we observed that a data link (or transport layer) protocol typically performs multiple functions. This observation led us to ask some fundamental questions, such as: What is meant by protocol A being an abstraction of protocol B ?

Communicating systems History. One of the first uses of the term protocol in a data~ommutation context occurs in a memorandum entitled A Protocol for Use in the NPL Data Communications Network written by Roger Scantlebury and Keith Bartlett in April 1967.. On the ARPANET, the starting point for host-to-host communication in 1969 was the 1822 protocol, which defined the transmission of ...

Communication Protocol Specification And Verification ...

Summary: Protocol verification is a process of checking whether the interactions of protocol entities, according to the protocol specification, do indeed satisfy certain properties or conditions which may be either general (e.g., absence of deadlock) or specific to the particular protocol system directly derived from the specification.

Abstract : It is becoming increasingly important that communication protocols be formally specified and verified. This report describes a particular approach~the state transition model~using a collection of mechanically supported specification nd verification tools incorporated in a running system called Affirm.
