Statistical mechanics in itself can be a bit difficult to understand, but McQuarrie is one of the best authors I have come across. I'd definitely recommend this book because it really goes in depth with explaining stat mech but in such a way that you'll be able to follow!

Anton Van Der Ven

Problem 3-4 Fall 2003

We have to derive the
thermodynamic

properties of an ideal
monatomic gas from

the following: $\epsilon = \frac{3}{2}mkT$

and $q = \frac{V}{h^3} \int e^{-\epsilon/kT} d^3p$

is the partition

function for the grand

canonical ensemble,

where T, V , are fixed.

The characteristic

potential

Don McQuarrie's research interests were in theoretical chemistry, specifically in statistical thermodynamics of electrolyte systems and transport through membranes, stochastic differential equations, and nonlinear dynamical systems.
