VoIP Hacks book. Read reviews from world's largest community for readers. Voice over Internet Protocol (VoIP) is gaining a lot of attention these days, a... In a VoIP network's case, hackers can auto-generate thousands of phone calls on a computer, or use compromised cellphones, with the same effect either way: to tie up the lines and deny service to the target. Alternatively, a DDoS attack can also target the VoIP system's routers to knock out the whole network.

How VoIP Hacking Works - All Covered

VoIP has seen rapid implementation over the past few years, many users choose VoIP and leave behind the traditional telephonic providers in order to pay cheaper bills; for companies using VoIP is an easy way for communication between their several branches and for their teleworking employees.

VoIP Hacking Techniques - Hakin9

Banner grabbing is a well-known technique in enumeration, and the first step to enumerate a VoIP infrastructure is by starting a banner grabbing move. In order to do that, using the Netcat utility would help you grab the banner easily, or you can simply use the Nmap script named banner: nmap -sV --script=banner.

First and foremost, VoIP calls can be easy to hack. All that needs to be done is tricking a phone service provider — or Internet service provider — into thinking that a VoIP phone call is coming from a certain IP or phone number. Fortunately, though, there are five specific ways in which you can pinpoint if your VoIP system has been hacked.
